NEW MODELS

Cloudflare open-sources a decision model: Apache 2.0 weights, 27B and 9B

Announced October 1, dissected by InfoQ on October 8. Clef answers typed questions with probabilities instead of text, and the weights are on Hugging Face.

COMPILED FROM CLOUDFLARE, INFOQ

Cloudflare released Clef and Clef-flash, decision models that take a state plus a schema of typed questions and return a probability for every allowed option in one forward pass. No free text, no output parsing.

Clef is 27B parameters with a vision encoder, Clef-flash 9B. Clef carries a 64K context against 32K for TypeSafe's Jev, whose API it copies.

The licence is what matters: the weights ship under Apache 2.0 on Hugging Face, so Clef

can run on your own cluster. Jev lists at \$0.042 per million input tokens, OpenAI's Decisions API at \$0.10.

www.infoq.com/news/2026/10/clef-decision-models

DECISION LATENCY, IN MILLISECONDS

39 CLEF-FLASH • MEDIAN

122 CLEF-FLASH • P95

209 CLEF 27B • MEDIAN

524 JEV • MEDIAN

Cloudflare's own benchmark table, rounded. Laya is faster still at 5.8 ms median but, Cloudflare says, trades quality for it. On BFCL case exact, Clef-flash scores 98.76 and Jev 95.75. Source: blog.cloudflare.com.

AI ON KUBERNETES

A shared peer-to-peer cache cut a 268 MB model pull from 11 seconds to 3

Dragonfly run manager-less under two vCluster tenants on October 8, with the author listing what the test does not prove.

COMPILED FROM CLOUD NATIVE NOW, CONTRIBUTED CONTENT

Pavan Madduri, a platform engineer at W.W. Grainger and elected tech lead of CNCF's TAG Workloads Foundation, put Dragonfly schedulers, seed peers and a client DaemonSet on the host cluster, then gave two tenants their own vCluster API server.

Both pulled the same Hugging Face file, 267,954,768 bytes, and got the same digest and Dragonfly task ID. Tenant A took about 11 seconds, tenant B about 3. He is a vCluster ambassador and Dragonfly contributor, and says origin bytes were never metered.

OPEN WEIGHTS

Reflection's Beam: 501B parameters trained in under four weeks

Announced October 5. Apache 2.0 weights are promised later this month; today it is a waitlist, and the API beta caps context at 262K.

COMPILED FROM REFLECTION AI, TECHCRUNCH

Beam is a sparse mixture-of-experts model: 501 billion total parameters, 23 billion active, text only. Reflection says it pre-trained on 23.8 trillion tokens in under four weeks on 6,144 NVIDIA GB300 NVL72 GPUs,

Continued on page 2

PLATFORM ENGINEERING

Give agents propose-only rights, not root

Published October 8: an agent may open the pull request, but must not approve, merge, sign or publish the result.

COMPILED FROM CNCF

Mauro Morales, who maintains Kairos, says an AGENTS.md file cannot guarantee what a non-deterministic process does with root, so the boundary has to be structural. In his example an agent traced boot stalls to PE sections aligned on 512 bytes where the systemd stub wants 4 KB; humans shipped the fix.

Full story → www.cncf.io/blog/2026/10/08/dont-give-ai-agents-root-make-them-propose-the-next-system-state

CARTOON OF THE DAY

Drawing: Claude

Preparedness.

WHY IT'S FUNNY The goldfish has strapped on a diving mask and snorkel without ever leaving its bowl. The joke is equipment as reassurance: it is kitted out for the one condition it has never once been out of.

PRESS RELEASE · FROM GITHUB RELEASES AND NOTIFICATIONS

Frontend 1.7.0 makes Ask Autopilot one button and ends the endless spinner

October 9, 2026 — On October 8 the frontend shipped 1.7.0 with a single Autopilot entry point and a fix for create requests sent without a name, while the installer reached 0.3.407 with tighter RBAC.

KRATEO PLATFORMOPS

GitHub releases, github.com/krateo-platformops

frontend 1.7.0 · Oct 8

- Create requests with an empty name returned 400 and left an endless spinner; both are fixed.
- Autopilot is now one primary “Ask Autopilot” button, and button colours follow intent.

github.com/krateo-platformops/frontend/releases

installer 0.3.407 · Oct 8

- installer-agent 0.3.3 drops the patch verb on installers and adds four new skills.
- Component comparison matches Helm releases by name; lines 2.7, 3.0 and 4.0 detected, only 4.0 verified.

github.com/krateo-platformops/installer/releases

Latest elsewhere: snowplow 1.12.39 and alert-provider 0.2.48 (Oct 6), nightly-review 0.1.31 (Oct 7), core-provider 2.13.23, portal 1.8.67 and observability 0.1.20 (Oct 5).

KRATEO AGENTIKO

Merged into main this week

No new Krateo Agentiko pull requests since the last issue.

REGISTRIES

Harbor 2.15.4 puts back the two defaults 2.15.3 broke three days earlier

Out October 9. Private-network webhooks and legacy signer pulls are allowed again by default.

COMPILED FROM GITHUB · GOHARBOR

Harbor 2.15.3, released October 6 with thirteen security advisories, flipped two defaults: webhooks to internal addresses stopped being delivered, and signing new unsigned images returned 412 in content-trust projects. It also regressed push replication to registries such as AWS ECR.

2.15.4 is the promised patch. Both defaults are back, and the legacy signer switch now sits in harbor.yml.

NEWS IN BRIEF

NETWORKING

Gateway API 1.7 moves HTTPRoute retries to Standard

v1.7.0-rc.1, tagged October 8, graduates GEP-1731 retry configuration — codes, attempts and backoff. Experimental SessionPersistence and XBackend fields were renamed, so check manifests first.

— GitHub · kubernetes-sigs
github.com/kubernetes-sigs/gateway-api/releases/tag/v1.7.0-rc.1

HPC & BATCH

Kueue 0.20.1 unpins elastic pods from phantom nodes

Released October 8 with 0.19.8. Elastic Pods for ProvisioningRequests now carry both required annotations, so the autoscaler stops pinning them to nodes it never creates.

— GitHub · kubernetes-sigs
github.com/kubernetes-sigs/kueue/releases/tag/v0.20.1

CLOUD NATIVE SECURITY

A host key on the wrong curve passes wolfSSH

wolfSSH 1.6.0, out October 8, fixes five flaws up to 1.5.0. CVE-2026-16516, CVSS v4 9.0: the client never checks the ECDSA curve against the negotiated algorithm.

— wolfSSL, securityonline.info
securityonline.info/wolfssh-vulnerabilities-cve-2026-16516

CLOUD NATIVE SECURITY

Dell storage modules handed out root on nodes

Advisory DSA-2026-448, October 2, covers six flaws in Container Storage Modules. Two are CVSS 10.0, missing authentication; CVE-2026-67269 gives root on cluster nodes. Fixed in 1.18.0.

www.bleepingcomputer.com/news/security/new-max-severity-dell-csm-flaws-give-hacker-s-admin-privileges

SECRETS

Expired AppRole secret IDs still logged in

OpenBao 2.7.1 and 2.6.4, both October 1, carry six security fixes. A Secret ID authenticated after expiry whenever tidy had not yet run.

— GitHub · openbao
github.com/openbao/openbao/releases

MESSAGING

Dapr 1.18.5 stops Event Hubs losing messages

Out October 8 with 1.17.15. The Azure Event Hubs component checkpointed events the application had not handled; both releases now checkpoint only handled events.

— GitHub · dapr
github.com/dapr/dapr/releases/tag/v1.18.5

CNCF

311 CNCF ambassadors, 58 of them new

The 2026-2028 cohort, announced October 6, drew over 600 applications.
