NEW MODELS

Claude Haiku 5.5 cuts the list price tenfold, but the discount stops at 100,000 tokens

Out October 7 with a 1M-token context and 128K output. A new tokenizer and a long-prompt tier eat into the headline saving.

COMPILED FROM ANTHROPIC, VIA DATACAMP AND MARKTECHPOST

Anthropic released Claude Haiku 5.5 on October 7, generally available as claude-haiku-5-5 on the Claude API and on Amazon Bedrock, Google Cloud, Microsoft Foundry and AWS. It carries a 1M-token context,

128K-token output and an effort setting: low, medium, high, max.

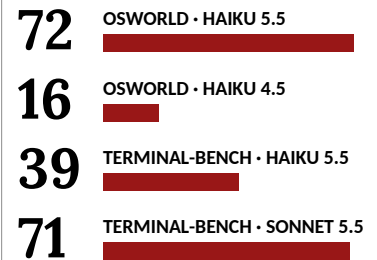

List price is \$0.10 per million input tokens and \$0.50 per million output below 100,000 tokens, a tenth of Haiku 4.5. Above that it is \$0.50 and \$2.50, so long prompts pay half the old rate, not a tenth. The Batch

API takes 50% off both ways.

Two migration traps. The new tokenizer turns the same text into about 30% more tokens, and calls setting budget_tokens, temperature, top_p or top_k away from defaults now error outright.

ANTHROPIC'S OWN BENCHMARKS

Vendor-reported figures, rounded. Haiku 5.5 trails Sonnet 5.5 on every published benchmark. Humanity's Last Exam with tools: 57.4% against 18.7% for Haiku 4.5. Source: anthropic.com, via datacamp.com.

CLOUD NATIVE SECURITY

Cloudflare set frontier models loose on its own WAF: 1,107 payloads, 49 findings

Across 45 scenarios the harness mutated blocked attacks until one slipped through. Three ruleset changes came out of it, all SSRF.

COMPILED FROM CLOUDFLARE, INFOQ

Cloudflare put frontier models in a controlled harness and pointed them at its own Web Application Firewall. Blocked attacks were the seed: one model call proposed the next mutation while a second read the response, so attempts adapted without the models issuing requests.

Over 45 scenarios across six categories, from XSS and SQL injection to SSRF and Log4j, the harness fired 1,107 attempts. The WAF blocked 558. Triage left 49 findings, 48 of them command injection or SSRF, and three Managed Ruleset

changes followed.

“When it comes to exploiting applications, what LLMs are really good at is iterating and mutating attack payloads faster than any human hacker could do.”

CLOUD NATIVE SECURITY

OpenSSH 10.6 breaks compression and some usernames on purpose

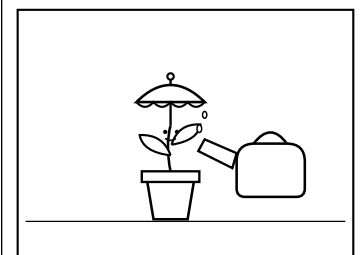

COMPILED FROM OPENSSSH, THE NEW STACK

Compression loses its LZ77 dictionary coder: every channel in a session shared one dictionary, and researchers showed that controlling input on one channel could recover secrets from another. The second break rejects \$ and \ in usernames passed on the command line.

That stops them reaching a shell through ProxyCommand or Match exec; names set with the User directive are exempt. The release also enables the hybrid post-quantum signature ssh-mldsa44-ed25519.

CARTOON OF THE DAY

Drawing: Claude

Boundaries.

WHY IT'S FUNNY A houseplant has put up a tiny umbrella just as the watering can arrives, politely refusing the one thing keeping it alive. The joke is self-defeating self-care: it is the plant version of blocking your calendar against the meeting you asked for. Anyone who has held a firm line at exactly the wrong moment will recognise the pose.

NEWSROOM

PRESS RELEASE · FROM GITHUB RELEASES AND NOTIFICATIONS

Frontend puts one header and an accessibility gate on every page

October 8, 2026 — Between October 5 and 7 the frontend landed a shared screen header and CI accessibility checks, the portal made Run apply act as the clicking user, and nightly review fixed a blueprint lookup that never resolved.

KRATEO PLATFORMOPS

GitHub releases, github.com/krateo-platformops

frontend 1.6.99 · Oct 6

- A new ScreenHeader component enforces one header layout and a single breadcrumb per page.
- 1.6.98 made eslint-plugin-jsx-a11y a CI gate and fixed keyboard access on form controls.

github.com/krateo-platformops/frontend/releases

portal 1.8.67 · Oct 5

- Run apply now runs the apply script as the user who clicked it, with an Apply runs tab.
- 1.8.66 shows blueprint catalogue cards automatically when their ConfigMaps are released.

github.com/krateo-platformops/portal/releases

nightly-review 0.1.31 · Oct 7

- A blueprint component lookup never resolved its destination; both spellings are now registered.

github.com/krateo-platformops/nightly-review/releases

observability 0.1.20 · Oct 5

- The default alerts stop firing on the incident pipeline's own noise.

github.com/krateo-platformops/observability/releases

Latest elsewhere: installer 0.3.406 (Oct 7), snowplow 1.12.39 and alert-provider 0.2.48 (Oct 6), core-provider 2.13.23 (Oct 5).

No new Krateo Agentiko pull requests since the last issue.

PLATFORM ENGINEERING

Vendor survey: 16.9 hours a week debugging against 9.8 writing code

Coleman Parkes ran it for Undo, which sells debugging tools. 35% of generated code reaches production before the team understands it.

COMPILED FROM COLEMAN PARKES FOR UNDO, VIA INFOQ

Published October 7 across 300 senior engineering leaders on mission-critical C and C++: 9.8 hours a week producing code against 16.9 debugging, 42% of the week. 81% had a production incident in six months and 93% have seen a root cause misdiagnosed through hallucination.

CNCF

Meshery reaches CNCF incubation and v1.0 on the back of 7,065 contributors

The Technical Oversight Committee voted on October 7, five years after sandbox. Commits rose 350% in the year to July 1.

COMPILED FROM CNCF

Meshery, a management plane for Kubernetes with roughly 400 integrations, became a CNCF incubating project on October 7 and announced v1.0.

Behind the vote: 7,065 contributors from 55 countries, nearly 15,000 GitHub stars and over 26,800 pull requests.

NEWS IN BRIEF

OBSERVABILITY

Splunk's Patroni API takes OS commands without a password

Splunk patched 22 flaws on October 8. CVE-2026-76268, CVSS 9.8, lets an unauthenticated attacker run OS commands through the Patroni REST API. Fixed in 10.4.3, 10.2.7, 10.0.10 and 9.4.15. Otherwise disable the PostgreSQL sidecar in server.conf.

CLOUD NATIVE SECURITY

DolphinScheduler handed kubeconfig to any logged-in user

Apache fixed six broken-authorisation flaws in DolphinScheduler 3.4.3 on October 8. CVE-2026-71895 let any authenticated non-admin read the admin-managed Kubernetes cluster config, credentials included, in 3.2.0 up to 3.4.3.

KUBERNETES

1.38 reaches its second alpha while 1.34 counts down

v1.38.0-alpha.2 was tagged on October 7, eight days after alpha.1; stable is 1.37.1. The October patch is targeted for October 13, and 1.34 goes end of life on October 27.

DATABASES

Spanner Omni goes GA without the atomic clocks

Google made its distributed SQL database generally available off Google Cloud on October 7. TrueTime's atomic clocks give way to software error-bounded time sync. There is no availability SLA.
