AI ENGINEERING

Agents rewrote 800,000 lines of Copilot into Rust: startup 5.25s to 292ms

Reported October 9: 14.5 weeks, 128 pull requests, 135 releases shipped while the work ran — and commenters who think a compiler proves less than GitHub implies.

COMPILED FROM INFOQ

GitHub has moved the runtime behind Copilot CLI, the Copilot app and the Copilot SDK off TypeScript and Node.js onto Rust, with AI agents writing most of the implementation. Over 800,000 lines of pro-

duction code were replaced.

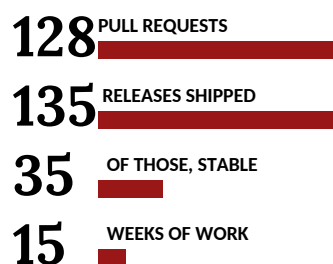

The payoff is startup. Client startup, session creation and one turn took 5.25 seconds through the old out-of-process design, which needed Node.js and V8 and about 100 MB of working set per client. Embed-

ded in-process through a C ABI, the Rust runtime does it in 292 milliseconds.

A temporary N-API layer, 2,019 exports against 3,356 call sites, let existing tests cover new Rust, then was deleted. Of 4,478 cargo check runs, 87.1 per

Continued on page 2

THE REWRITE, COUNTED

GitHub's own figures, reported by InfoQ. The 14.5 weeks are rounded to 15 here; 100 of the 135 releases were prereleases. Source: [infoq.com](#).

PLATFORM ENGINEERING

NIS2 and DORA need an artifact with an owner, not another policy document

A CNCF member post, October 9: security can write the rule, but only the platform team can merge it. Not legal advice, the author says.

COMPILED FROM CNCF, MEMBER POST

Matteo Bisi of Reevo maps NIS2 Article 21 and DORA Articles 8, 9, 10, 17, 19 and 28 onto six things a platform team can demo: a hardened image catalogue, a secrets manager as the only credential path, audit and ingress logs in the SIEM, an admission policy banning unpinned tags, an incident runbook with a 24-hour fact pack, and SBOMs retained in CI.

The handover is the artifact, never the article number. His RACI: platform engineering managers are accountable, security is only consulted, and each exception is owned by the manager who asked for it.

EVENT STREAMING

**Cloudflare puts a
partitioned log on
object storage and
pays for it in latency**
Public beta since October 1, dissected October 9. Cloudflare claims a second of p99 produce latency; a tester measured 7.5 seconds end to end.

COMPILED FROM CLOUDFLARE, INFOQ

K2 is a durable, partitioned log on R2. Object stores cannot append, so an edge service holds writes in memory, waits for a batch to fill, then writes a segment file. That wait is the latency. A tester measured delivery at 2.5 s p95 and 7.5 s p99,

CLOUD NATIVE SECURITY

Camel Karavan applied whatever your kubernetes.yaml asked for

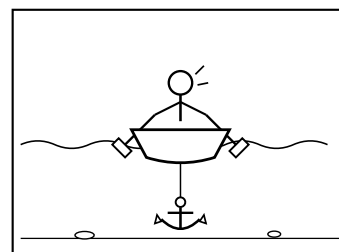

Two flaws at CVSS 8.8, published October 9, both fixed in 4.22.1. No exploitation reported.

COMPILED FROM SECURITYONLINE.INFO

CVE-2026-103413 covers 4.0.0 to 4.22.0: Karavan applies a project's kubernetes.yaml without checking resource kinds or pod settings, so an authenticated user could deploy a pod with host networking or raised privileges. CVE-2026-103412, a path traversal back to 3.18.0, allows writes outside the project folder. Upgrade to 4.22.1.

CARTOON OF THE DAY

Drawing: Claude

Making excellent progress.

WHY IT'S FUNNY The rower is pulling hard enough to sweat, and the boat has not moved, because the anchor is still down on the sea bed. The joke is effort mistaken for progress: nobody checked the one thing holding the whole trip in place.

NEWSROOM

PRESS RELEASE · FROM GITHUB RELEASES AND NOTIFICATIONS

Snowplow 1.12.40 shuts the last credential leak; the installer jumps Config Connector 59 minor versions

October 10, 2026 — Three components shipped on October 9: snowplow closed a credential leak, portal unstuck the Platform Review drawer, and the installer jumped GCP Config Connector 59 minor versions.

KRATEO PLATFORMOPS

GitHub releases, github.com/krateo-platformops

snowplow 1.12.40 · Oct 9

- Credentials no longer leak through URL parse errors in logs, and the AUTHN informer stops retaining Secret data.
- Live refresh works on dense pages: a POST variant takes data that long GET URLs rejected.

github.com/krateo-platformops/snowplow/releases

installer 0.3.410 · Oct 9

- 0.3.408 moved GCP Config Connector from 1.99.0 to 1.158.0; all 206 GCP blueprints were rechecked.

github.com/krateo-platformops/installer/releases

portal 1.8.68 · Oct 9

- The Platform Review drawer hung with no error: the change-request claim ref had no name.

github.com/krateo-platformops/portal/releases

Also Oct 9: alert-provider 0.2.49 skips writes for covered firings. Lat-est elsewhere: frontend 1.7.0 (Oct 8), core-provider 2.13.23 (Oct 5).

KRATEO AGENTIKO

Merged into main this week

No new Krateo Agentiko pull requests since the last issue.

CI PLATFORMS

CircleCI's runner autoscaler hits 1.0, and you cannot upgrade in place

Machine Runner Orchestrator 1.0.0 is generally available, reported October 9. The rename moves the Helm chart and both repositories.

COMPILED FROM INFOQ

It scales self-hosted runner VMs from CI demand and now drives CPU, GPU and ARM resource classes from one deployment on GKE, AKS, EKS or KubeVirt. Preview installs cannot be upgraded: uninstall runner-provisioner, then install

1.0.0, with those classes offline in between.

NEWS IN BRIEF

AI ON KUBERNETES

KServe 0.21 gives ServingRuntime its own resource claims

Released September 25 and still the latest. CRDs install independently with a Helm chart each, ServingRuntime now takes DRA resource claims, and RawDeployment HTTPRoutes get canary traffic splitting.

github.com/argoproj/argo-cd/releases/tag/v3.6.0-rc2

EXPLOITED IN THE WILD

Five flaws from 2015 to 2023 join the KEV catalogue

CISA added five on October 8: BIND CVE-2015-5477, Struts CVE-2016-3081, Strapi

CVE-2023-22894, ONLYOFFICE CVE-2021-3199 and ProFTPD CVE-2015-3306. SonicWall SMA1000 CVE-2026-102255, a pre-auth SSRF at CVSS 10.0, was flagged as exploited on October 9.

securityonline.info

SOVEREIGNTY

Source code is not operational sovereignty, an OSS EU panel says

Reported October 8 from Prague. Jonathan Bryce (CNCF), CRob Robinson (OpenSSF) and Thierry Carrez (Linux Foundation Europe) worked through the EU framework's eight objectives. Their joint line: believing any region can be 100%

sovereign is naive.

— InfoQ
www.infoq.com/news/2026/10/technological-sovereignty-panel

OBSERVABILITY

The OpenTelemetry Collector drops the Wavefront receiver

v1.1.0 / v0.162.0, September 29, breaks things. The Wavefront receiver is gone, the Elasticsearch exporter drops flush and num_workers, and the Kafka receivers' metadata retry limit rises from 3 to 20.

— GitHub · open-telemetry
github.com/open-telemetry/opentelemetry-collector-contrib/releases
