CLOUD NATIVE SECURITY

Harbor patches 12 flaws at once: anonymous users could read private manifests

Four high-severity advisories landed on October 6. The worst lets any account with push rights to one project delete tags in every other.

COMPILED FROM GITHUB • GOHARBOR

Harbor published twelve advisories on October 6, four high, seven moderate and one low, all fixed in 2.13.6, 2.14.5, 2.15.3 and 2.16.0+. The worst, GHSA-qj39-pjf2-wmrc, is a path traversal: Harbor checks permissions against the

raw request path, then serves it after resolving the dot-dot segments.

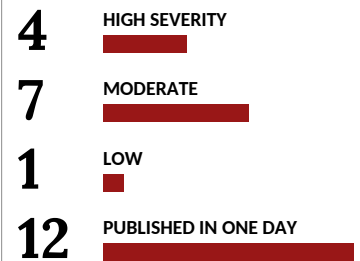

That one bug opens two holes. Anonymous users can read manifests from private projects, provided the instance hosts one public project. Any account with push access to a

single project can modify or delete tags and manifests in every project.

Robots are the other theme: GHSA-w5fq-xrhj-j7g2, CVSS 7.2, let a system robot with User: Update set the admin flag on any user. If you cannot patch, reject /v2/ requests

Continued on page 2

HARBOR'S OCTOBER 6 ADVISORIES

All fixed in 2.13.6, 2.14.5, 2.15.3 and 2.16.0+. The release also bumps Go to 1.26.7 and bundled Trivy to 0.74.0. Source: github.com/goharbor.

KUBERNETES

cgroup v1 now has a removal date: v1.38, and v1.35 already refuses to start

A kubernetes.io post of October 6 puts dates on a deprecation drifting since v1.31. One command tells you if you are exposed.

COMPILED FROM KUBERNETES.IO

Paco Xu's post of October 6 fixes the timeline. cgroup v2 went GA in v1.25 and cgroup v1 entered maintenance mode in v1.31. From v1.35 the kubelet's failCgroupV1 defaults to true, so it will not start on a cgroup v1 node, and that escape hatch goes away in v1.38.

The floor is Linux 5.8. Pressure Stall Information went GA in v1.36, in-place vertical scaling needs v2 for accurate enforcement, and eBPF cgroup programs will not attach without it. Run `stat -fc %T /sys/fs/cgroup/` on every node: cgroup2fs is fine, tmpfs is not.

NEW MODELS

Mistral Large 4: 1.05T parameters, 49B active, weights still to come

The preview API went live October 6 at \$1.36 per million input tokens. Open weights are promised for the end of the month.

COMPILED FROM MISTRAL AI, VIA SIMON WILLISON

Mistral opened a public preview of Mistral Large 4, nicknamed Le Chonk, on October 6: 1.05 trillion total parameters, 49 billion active per token, a 1.6B vision encoder and a stated one-million-token context, trained on 3,800 NVIDIA Grace

OBSERVABILITY

OpenTelemetry's Kubernetes attributes processor hits v1.0.0 and renames your labels

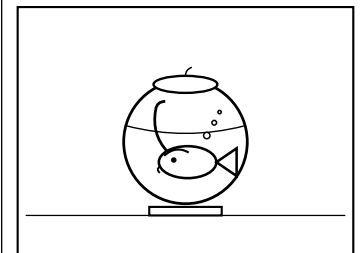

Stable for traces, metrics and logs. Plural label attributes go singular, so dashboards and alerts need a pass.

COMPILED FROM INFOQ, OPENTELEMETRY

The k8sattributes processor, which stamps pod, namespace, node and workload metadata onto telemetry, is now stable for traces, metrics and logs. It is not backwards compatible: container.image.tag becomes container.image.tags and plural forms go singular, k8s.pod.labels becoming k8s.pod.label.

CARTOON OF THE DAY

Drawing: Claude

You can never be too careful.

WHY IT'S FUNNY A goldfish in its bowl has strapped on a mask and a snorkel, the tube poking up above the waterline, even though it has gills and has lived underwater its entire life. The joke is pure overcaution: it is the fish equivalent of wearing a life jacket in the bath. Anyone who has over-prepared for something completely safe will recognise the instinct.

Snowplow redacts credentials from its logs; alert-provider goes native

October 7, 2026 — On October 6 and 7 snowplow closed another credential-leak path at 1.12.39, alert-provider dropped its Python controller, and the installer pulled both in at 0.3.406.

KRATEO PLATFORMOPS

GitHub releases, github.com/krateo-platformops

snowplow 1.12.39 · Oct 6

- Endpoint credentials were written to logs in clear text and are now redacted through redact.URL.
- One stale aggregated ApiService used to break GET /list for every category.

github.com/krateo-platformops/snowplow/releases

alert-provider 0.2.48 · Oct 6

- The controller is now a native Go implementation, retiring the Python one; the repo was renamed from alert-troubleshooter.

github.com/krateo-platformops/alert-provider/releases

installer 0.3.406 · Oct 7

- 0.3.404 fixed secret data leaking into OpenTelemetry logs; 0.3.406 pins nightly-review 0.1.31.

github.com/krateo-platformops/installer/releases

Latest elsewhere: frontend 1.6.99 and nightly-review 0.1.31 (Oct 6–7), core-provider 2.13.23 and portal 1.8.67 (Oct 5).

KRATEO AGENTIKO

Merged into main this week

autopilot PR #94 · merged Oct 2

- Sub-agent sessions are isolated per call, so one call's context cannot bleed into the next. Relies on isolateSessions, live in ka-gent 0.10.1.

PLATFORM ENGINEERING

Cloudflare will sunset Wrangler for an agent-first CLI covering 3,000 API operations

cf is in open beta, generated from OpenAPI schemas. Agents already drive 48% of Wrangler use.

COMPILED FROM CLOUDFLARE, INFOQ

cf covers more than 3,000 API operations against roughly 280 functions in Wrangler, being generated from Cloudflare's OpenAPI schemas. Agents were a quarter of Wrangler use in

March 2026 and 48% last week, and one final Wrangler version will point at cf.

NEWS IN BRIEF

GITOPS

Argo CD patches every supported branch

3.5.4, 3.4.10 and 3.3.15 shipped on October 6 with 3.6.0-rc2, carrying coordinated security fixes and no advisory numbers yet. They also fix a repo-server health-check timeout that caused CrashLoopBackOff.

CLOUD NATIVE SECURITY

kubectl cp can be made to write anywhere on Windows

CVE-2026-19444, announced September 28, lets a malicious tar inside a container write to arbitrary paths on the client.

Medium, CVSS 6.5, Windows only. Fixed in kubectl 1.34.12, 1.35.9 and 1.36.5.

— discuss.kubernetes.io
discuss.kubernetes.io/t/security-advisory-cve-2026-19444-kubectl-cp-path-traversal-on-windows-allows-arbitrary-file-writes/35301

AI ON KUBERNETES

llm-d stops shipping its own CUDA images

The September 29 release deprecates the CUDA and AWS container images in favour of upstream vLLM ones, renames kv-cache to llm-d-router and moves vLLM to 0.30.0.
